
The intergenerational correlation between children's adult earnings and their own earnings is a study of the effects of genetic and environmental factors. This book provides a comprehensive analysis of the determinants of socioeconomic success within and between families. It includes contributions from a range of experts in the field, offering a multidisciplinary perspective on the topic.

The book examines the role of family background variables in the determination of income and earnings, taking into account the variability within and between families. It also explores the impact of investments in children on socioeconomic success and the transfer of socioeconomic position from one generation to the next.

The book is a valuable resource for researchers, educators, and policymakers interested in understanding the factors that contribute to socioeconomic success and how these factors differ within and between families.
